

ACE anchor™

An Economical Single Sided Fixing

ACE anchor™ offers an alternative, economical single sided fixing that quickly and simply secures ceramic liners from the wear side using standard off the shelf tooling eliminating the need for costly specialised fixing attachments.

ACE anchor™ fixings can be supplied pre-installed into the ceramic wear liners as a completed system or can be supplied as single sided fixing components (to be assembled with the liner on site).

The cost effective ACE anchor™ fixing is also available for the single sided fastening of metallic liner plates as ACE anchorM™ and as ACE anchorM-HD™ for heavy duty applications which utilises a 20mm screw.

ACE anchor™ fixings are perfect where access to both sides of the chute for changeout is difficult.
